

At Sqooba we have the chance to create a culture of compassion that helps us to improve and to make a difference in our work lives. It is possible to help people, build up a business and enjoy work. How we approach our daily job and each other is as important as the work itself because the way we treat each other, the values we share, and the way we collaborate will shape us as people.

Software and Data Engineer

Join the culture (→ our values)

- Choose positivity and give a smile
- Show gratitude and practice humility
- Default to transparency
- Focus on self-improvement
- Don't accept status quo
- Seek first to understand, then to be understood
- Take time and reflect

Your contribution (→ what you will do)

As part of the engineering team, you will be designing, developing and operating the customer solutions. You will support the customers in designing and developing their batch and real-time data pipelines. As a result, you will continuously improve the solutions by implementing new capabilities and features to further deliver value to the customers. You will collaborate with Data Scientist to build Data Products and provide them on the streaming platform.

About you (→ Personality and Behaviour)

- Are passionate about distributed systems and data intensive applications
- Enjoy using and participating in the development of open source applications
- Enjoy working with cutting edge software technologies and applying the latest paradigms
- Are eager to be an early adopter of emerging big data applications
- Savor the challenges of making diverse technologies work through the entire stack
- Team player and self-starter with a positive attitude

Your Background (→ Education and Experience)

- Master Degree in Computer Science or similar educational level
- Good experience with Java or Scala; Open to learn additional programming languages
- Knowledge of design principles and architectural patterns
- Knowledge of Big Data technologies such as Hadoop, Kafka, Spark, Cassandra and Kafka streams
- Knowledge of continuous integration workflows and continuous delivery build pipelines (Git, Jenkins and Maven)
- Experience with agile development methodologies and also DevOps culture
- Delivering systems and features with top-notch quality, on time
- Fluent English, German or French would be a nice plus

About us (→ Let's join forces)

A step away from your best job ever.

Every company will be a data company. Sqooba is a Swiss and German-based start-up, building analytical solutions and providing highly reliable end2end products for data streams and complex data landscapes.

This is a hands-on position with a wide variety of roles and responsibilities, ranging from designing and building extremely stable components and cutting-edge features, mentoring other engineers and helping companies to become much more data-driven.
